

## GOING FROM GREAT TO GREATER AT WPT POWER

**ABOUT WPT POWER CORPORATION.** Founded in Wichita Falls in 1992, WPT Power Corporation has built an international reputation for excellence in power transmission by providing easy-to-maintain and proven workhorses for every sector of the global economy. These sectors include energy, agriculture, dynamometer, forestry, marine, metal forming, mining, off-highway, paper/converting and steel industry applications.

**THE CHALLENGE.** With comprehensive services including design and extensive production capabilities, WPT takes special pride in their history of winning solutions. As part of their commitment to superior performance, WPT Power relentlessly seeks ways to improve their operations. To help in these efforts, WPT general manager Greg Patterson enlisted the assistance of TMAC West Texas.

**MEP CENTER'S ROLE.** To maintain their ISO 9000 certification, TMAC West Texas facilitated WPT's transition to an updated version of the standard. The help included training in Failure Mode and Effects Analysis (FMEA) along with innovative approaches for addressing new requirements. In addition, TMAC helped implement a new inventory management package to increase turns and reduce outages.

"On top of providing top flight technical help, the guys at TMAC have really been a positive influence in so many ways. In addition to supporting our objectives, they have helped us in building and maintaining our company culture. From operations to human resources to safety, this partnership has been very fruitful and I expect it to only produce more in the future."

-Greg Patterson, General Manager

## RESULTS
